

A complete "out of the box" imaging solution for Businesses and Organisations

Intuitive, user-friendly and secure as if you had the paper in your hands

Vault is

- Open and scalable – for five to thousands of users
- Simple and intuitive to use – users will feel as if they had the paper in their hands
- Very affordable
- Blindingly fast over the web – it uses Trapeze’s protocol based imaging technology
- Able to be integrated with any scanner or multifunction device

Do things your way

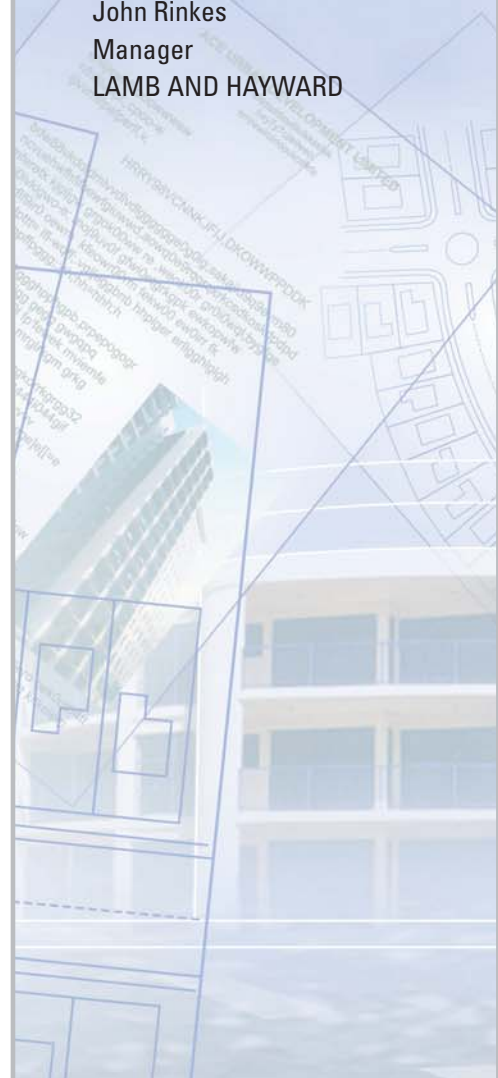

- Create your own database and personalize the search criteria using a user-friendly wizard
- Scan images directly to your own dataset quickly and easily
- Add or delete details to the already existing images in the dataset
- Use your own image data store using your MS Access or SQL Server – Trapeze Vault is ODBC compliant
- Import any image directory or single document to the existing dataset
- Sort the documents in your favourite way. Re-sort them any time in any order you need
- Search on single and multiple-fields, search for words in the data, annotations or bookmarks – find and access any information within seconds!
- Bookmarks and thumbnails provide the quick overview of the required files
- Select the document metadata you want to display (e.g. image ID, document type, references, notes and many more!)
- Email any document directly from your database
- Modify metadata, insert bookmarks and organize the document as if you had the paper in your hands
- Pages may be inserted into or deleted from existing documents.
- Annotate any stored information with stamps, handwriting, overlays etc and save the changes over the Web

Compliance, Customer service and Marketing

“ Vault took us about 20 minutes to set up on our own, including the database, search criteria and the rest, and none of us are computer experts.” said Jon Rinckes. “From then on, it was just a matter of scanning the old paperwork – in-between funerals. We think we have about 50,000 recorded funerals on the system.”

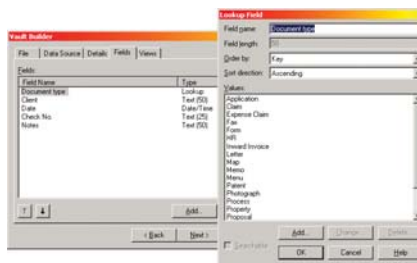

John Rinckes
Manager
LAMB AND HAYWARD

Advantages to the End User

End users love Vault because:

- They can see what they are doing. The search results look like the contents of their filing drawer- all files and pages are visible
- It's so intuitive – no training is needed
- They can do what ever they can do with the paper e.g. redact, annotate, print, send etc

Advantages to the Business

Business owner is in charge of his own business because:

- A document storage and retrieval business problem can be solved in minutes
- Any scanner or multifunction device can be used as a batch capture device within 20 minutes of opening the Vault box
- Databases are very simply made with a wizard
- Databases don't have to be perfectly specified before getting started. Vault can be enhanced after implementation without any need to do design work again
- A single click builds the entire web site and web access to Vault

The business is better able to serve its customers because:

- Documents in Vault are archived – but still as useful as if the files were in your hands
- Vault helps the business to meet customer expectation for speed and accuracy of service
- Disparate systems are unified – Vault can run as the document database for multiple existing applications (e.g. accounts payable, customer databases etc) both as local and web options
- Vault makes all documents, even if they are coming from multiple sources, behave the same way. MS Office documents, emails etc can all be stored in Vault (directly from MS Word or Outlook) as though they were printed and stored in the filing drawer with other paper documents
- Vault assists with office compliance: optionally redact any office document as a permanent record

Advantages to the Corporation

Businesses & Organisations like Vault because:

- The return on investment is high – typical payback is 2 to 6 months
- Vault increases the value of the investment in multifunction devices
- Vault enables dramatic productivity increases
- Documents can be shared easily
- There is a web option available (Vault Online)
- Vault unifies disparate systems (e.g. financial, helpdesk, proof of delivery)
- Vault reduces technology spending

Benefit to IT Departments

IT departments like Vault because:

- Vault has a high degree of compliance with existing IT infrastructures. Trapeze Vault...
 - uses existing hardware
 - uses existing corporate ODBC databases – doesn't need MS Exchange
 - doesn't need a computer server, simply a PC on the Network
 - is very simple to maintain
 - is easy on the network
 - integrates with other applications
- Business has an easy upgrade path to new applications. You can easily export Vault documents and data to other systems later (e.g. document management systems)
- There is a web version available Vault Online
- Vault runs as the document database for multiple existing applications (e.g. accounts payable, customer databases etc)

Trapeze Vault easily integrates into your environment: Windows, 2000, XP, 2003. Trapeze Vault Online requires Windows 2000 server or above.

No matter whether you have 20 or 60,000 employees, Trapeze Vault imaging database has the functionality needed for them to store, edit, search and access image documents in the most effective way!

For information about Trapeze™ or a demonstration, contact a representative at (800)860-8049 ext. 335.
