

**Trapeze Webstreamer is an industrial strength, web-enabling, imaging and document management software suite designed for use in-house or across the web.**

**Trapeze Webstreamer integrates seamlessly with your existing database systems, image capture and document management systems.**

**Make document image retrieval over the web fast and easy.**

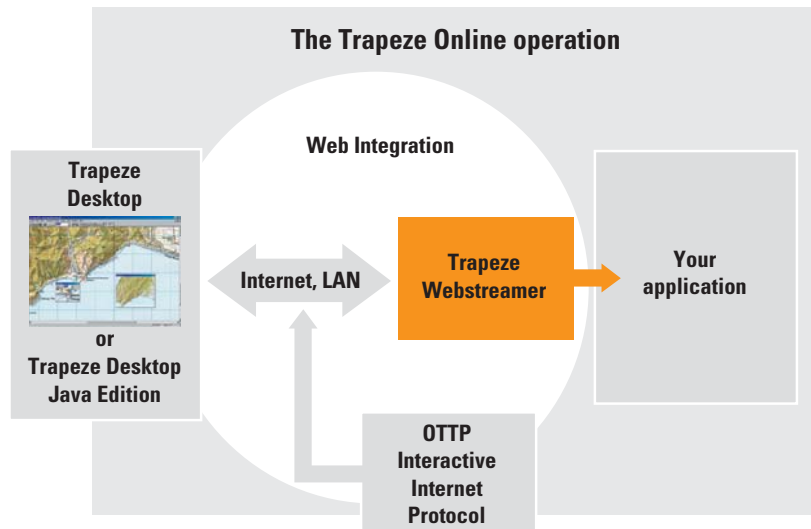

- Transform your document viewing services into profit centres with Trapeze Webstreamer warranted delivery billing technology.
- Slash the costs of document retrieval and delivery from offsite archives.
- Handle any image document:
- Documents which are thousands of pages long.
- Odd shaped images such as drill cores or seismic sections.
- Very large colour maps.
- Documents that contain both colour and black and white images.

**Trapeze Online empowers users:**

- to do practically on the screen everything they can with a paper document, and
- to continue to think of it as folders and paper.

Trapeze Online differs in nature from all other imaging products.

Trapeze Online™ is a client / server "Clip-in" to your application.

### Protocol Based Imaging

Trapeze Online is based upon Onstream's OTTP web imaging protocol. It is the foundation technology for blazingly fast interactive imaging over the web. It is the key to interactive web based NT authentication, virtual photocopying, remote image annotation, 128 bit encryption and much more!

### Trapeze Online enables users:

- Securely transmit documents over insecure network links.
- Have an interface that provides the same functionality as if they had papers in their hands.
- Reduce hugely the time spent searching and retrieving document image repositories for their customers.
- Deposit new images into the server image store - if authorised.

### Ease of use

Trapeze Online removes the costs and responsibility of indexing difficult data at the bureaux and imaging house. Provided client access is available, Trapeze Online enables clients to index their own scanned files and documents.

Trapeze Online empowers the users by adding more functionality to their existing:

- Infrastructure
- Databases (Relational, Text Retrieval Etc)
- Image Repositories
- Server Operating Systems
- Security Configurations.

Trapeze Online easily integrates into your environment: Windows 95/98/Me/XP, NT4(SP4)/2000. Trapeze Webstreamer requires NT4(SP4)Server or above.

Juggling the demands of a growing city and satisfying your citizens

“Trapeze essentially fulfilled all of council's functionality requirements, and the vendor demonstrated commitment to the product, good support, and a willingness to consider our suggested enhancements to the product to even further improve its functionality and user-friendliness.

I am literally surprised by the information Trapeze retrieves each time I do a search, and the information it can find that I never knew existed!
